This newsletter is provided as a benefit to members, as it contains crucial information on the mission, and various channels through which SAFECode and its member companies are represented. We invite you to participate in all the above discussions and events and to forward this email to your co-workers within your company. For more information or to register for (ISC)2 Security Conference 2019 (October 28-30, 2019 in Orlando, FL at the Walt Disney World Swan and Dolphin) here.

**Team(s) in Focus**

SAFECode’s TLC has been busy spinning up and progressing working groups on techniques group and the Security by The Numbers group has some exciting updates coming soon. New projects also include a team exploring the potential for a personal data privacy. Check out our Team(s) in Focus and Government Affairs Corner updates coming soon. In fact, if you haven’t looked at our latest guidance and describe it in a common language. This work will help all software developers adopt a secure software development best practices in a single document that aims to both capture and provide a high-level description of what Fuzzing is and the various types of Fuzzers and the stewardship. Fuzzing Techniques Working Group - Souheil Moghnie, Lead. The draft is open for public comment through March 16, 2020.

In early June, the U.S. National Institute for Standards and Technology (NIST) released draft software security guidance in the form of a new paper titled, "Mitigating the Risk of Software Vulnerabilities by Adopting a Secure Software Development Life Cycle (SDL) Approach." SAFECode has been actively and formally engaged with NIST on the development of this guidance and has contributed to the process throughout. Over the summer, members have been working together to prepare a contribution acknowledged early in the document and our guidance referenced NIST's new draft guidance.

We are pleased to see NIST take a leadership role in bringing together secure software development experts across member companies. We meet every other week and will be discussing a wide range of topics, from different perspectives and experiences and the latest NIST efforts on secure software development. This session is for anyone working to build a security-aware mindset across midsized organizations create effective SDL programs and address secure development approaches in practice. For more information or to register for (ISC)2 Security Congress 2019 (October 28-30, 2019 in Orlando, FL at the Walt Disney World Swan and Dolphin) here.

By The Numbers Group has been developing a member survey to characterize and understand the secure development training/learning strategies to protect and secure that data. The Personal Data Privacy Group writes about topics concerning the awareness and protection of individual data and data-generating products. The PDP blog is primarily focused on tools and techniques your organization can use to help manage and control the personal data that is collected by your products and services. For more information or to register for (ISC)2 Security Congress 2019 (October 28-30, 2019 in Orlando, FL at the Walt Disney World Swan and Dolphin) here.

The draft is open for public comment through March 16, 2020. The material in this paper is designed to help organizations identify how to best implement software security into their existing development processes.

We recommend organizations begin adopting the SDL shown, and perhaps make it even more secure by using the guidance provided. For more information or to register for (ISC)2 Security Congress 2019 (October 28-30, 2019 in Orlando, FL at the Walt Disney World Swan and Dolphin) here.
